

"Integrated Solutions. Enduring Assets"

Environmental Policy

WESMAR and its related companies are committed to continuous improvement of the Environmental Management System to effectively manage our environmental footprint and prevent pollution throughout our operations.

All documentation and processes are underpinned by ISO 14001, as well as compliance with relevant local government, state, and federal statutory, legislative, and regulatory requirements.

A culture of environmental awareness and management across the organisation is achieved by:

- Ensuring awareness of the WESMAR Environmental Management System and principles by all workers and subcontractors, including clauses in supply conditions and contracts outlining the requirements for compliance with the WESMAR Environmental Management Plan.
- Setting targets and objectives for continuous improvement to enable the measurement of environmental performance.
- Maintaining trained staff and appropriate equipment to handle any environmental emergency that could possibly occur on WESMAR premises.
- Liaising with local government authorities to ensure that we meet requirements for the prevention of pollution and effective waste management.
- Providing adequate resources to enable proactive planning and implementation of activities designed to eliminate the incidence of pollution.
- Proactively managing chemical and hazardous substances to eliminate the potential for pollution within areas controlled by WESMAR.
- Reviewing the Environmental Management System, actions, and outcomes by Executive and Senior staff, alongside regular monitoring of the system to ensure compliance.

WESMAR IS COMMITTED TO PROTECTING THE ENVIRONMENT THROUGH RESPONSIBLE MANAGEMENT.

Ricky Lane
Managing Director
